Hi, I am José Carlos Aponte

**Born in Lima, Perú, but
grown up in the
countryside**

Hi, I am José Carlos Aponte

Went to public schools

Hi, I am José Carlos Aponte

Studied Chemistry in college:

- 1- Study something that can be done everywhere**
- 2- Study something that will give you time for yourself**
- 3- Leverage your strengths, don't compare yourself to others**

Hi, I am José Carlos Aponte, PhD

Left home to pursue a
doctorate degree in
Organic Chemistry at
the University of
Louisville in Kentucky,
USA

Hola, soy José Carlos Aponte, PhD

Went to work at Brown University

There I learnt about astrobiology and astrochemistry

In 2012 moved to MD to work at NASA Goddard

Where is NASA?

Here is where I
work

“My” Asteroid

In 2017 asteroid 2005 EY161 was renamed after myself:

117652
Joséaponte

For my work as
astrochemist and as
part of the OSIRIS-REx
mission.

Physical Parameter Table

Parameter	Symbol	Value	Units	Sigma	Reference	Notes
absolute magnitude	H	16.1		n/a	MPO453647	
diameter	diameter	3.006	km	0.132	urn:nasa:pds:neowise_diameters_albedos::2.0[mainbelt] (http://adsabs.harvard.edu/abs/2011ApJ...741...68M)	
geometric albedo	albedo	0.078		0.014	urn:nasa:pds:neowise_diameters_albedos::2.0[mainbelt] (http://adsabs.harvard.edu/abs/2011ApJ...741...68M)	

117652 Joséaponte

Discovered 2005 Mar. 9 by Mt. Lemmon Survey at Mount Lemmon.

José Aponte (b. 1981) is an astrobiologist at the Goddard Space Flight Center for the OSIRIS-REx Mission. His research emphasis is in organic chemistry in meteorites.

Easy Take-Homes for a Successful Career

Adapted from Dr. Stephanie Getty, Deputy Director of Solar System Exploration Division at NASA GSFC

- Be yourself
- Admit to what you don't know – and don't be afraid to contribute what you do know
- Have an open mind about where your career will take you
- Set a work-life balance that is right for you – there is no one-size-fits-all
- If one path doesn't suit you, look for opportunities that really interest you to bring out your best

Don't chase or follow your dreams, focus on your reality and how that can take you to fulfill your dreams.

-Christopher Nolan?

Genesis Mission

Genesis was designed to capture pristine solar wind particles and return them to Earth for analysis.

It successfully gathered solar material, but its return capsule suffered a hard crash in the Utah desert in September 2004 due to a deployed parachute design error.
